

It is instructive to think about how AI has progressed since Deep Blue.

Maria is considering whether to “go synthetic.” Being a cautious person, she does this gradually. At t_1 , she has one neuron replaced by a silicon device which replicates the functioning of that neuron.

Would she notice a change? It seems that she would not.

So now suppose that she has a second neuron replaced. Would she notice a change? Again, it seems that she would not.

This process might continue until all of Maria's neurons have been replaced. Gradually, this synthetic system inside her head could then be supplemented in ways which gave it more memory and greater processing speed. Here Maria would notice a difference — she would be able gradually to solve problems faster, and remember much more. But it does not seem as though changes of this kind could make it “no longer Maria.”

Once we have gone this far, it seems pretty clear that we could provide synthetic replacements of all of Maria's body parts without her ceasing to exist. Surely replacing Maria's index finger with a synthetic replacement need not involve a change in identity!

Let's call the outcome of this procedure "Digi-Maria." It seems plausible that Maria could survive this process; so it seems plausible that Maria-Digi-Maria.

Let's call this procedure **slow gradual destructive uploading**. It is **destructive** because Maria's neurons (and other parts of her body) are destroyed as they are replaced. It is **gradual** because this happens, not all at once, but one by one. It is **slow** because it takes place over a long period of time.

our discussion so far suggests:

You can
survive slow
gradual
destructive
uploading.

Now imagine a procedure just like this one, but in which the replacements happen more rapidly. Maybe each replacement takes just a small fraction of a second. This would be a case of **fast** gradual destructive uploading.

Surely this makes no difference; the speed with which the replacement of the parts makes no difference. That suggests:

If you can survive
slow gradual
destructive uploading,
you can survive fast
gradual destructive
uploading.
