

1. For any sense experience, I can imagine a situation which is indistinguishable from that sense experience but in which my environment is not as the experience says it is.
 2. If I cannot distinguish between two situations, then I cannot **know** which of them is real.
 3. I can never **know** whether any sense experience of mine is accurate. (1,2)
 4. If I cannot know whether any of my sense experiences are accurate, I cannot **know** whether there is an external world.
-

C. I do not **know** whether there is an external world. (3,4)

1. For any sense experience, I can imagine a situation which is indistinguishable from that sense experience but in which my environment is not as the experience says it is.
 - 2*. If I cannot distinguish between two situations, then I should not believe that one but not the other is real.
 - 3*. I should never believe that any sense experience of mine is accurate. (1,2*)
 - 4*. If I should never believe that any sense experience of mine is accurate, I should never form beliefs about the external world.
-

C*. I should never form beliefs about the external world. (3*,4*)

The next philosopher we'll discuss is someone who has a very different perspective on our beliefs about the external world than Descartes did.

According to G.E. Moore, it is no “scandal to philosophy” that we cannot prove the existence of the external world — for in fact, he thought, proofs of this kind are extremely easy to give.

More and more positive rule of belief which we have already discussed:

Let's now hold that up against the rule of belief which figured in our argument
for skepticism.

The seeming impossibility of replying to Descartes' argument — and hence the seeming impossibility of providing a satisfactory proof of an external world — was seen by the great German philosopher Immanuel Kant as a “scandal to philosophy.”

Good Argument $\rightarrow$ Belief

If there is a valid argument for P and you should believe each of that argument's premises, you should believe P.

Don't believe about the external world

The next philosopher we'll discuss is someone who has a very different perspective

Our second reading for today is from someone who has a very different perspective

extremely easy to give.

According to G.E. Moore, it is not 'scientific philosophy' that we can't prove the

existence of the external world — for in fact, though, proofs of this kind are

Let's now hold that up against the rule of belief which figured in our argument

for skepticism.

seemingly impossible providing a satisfactory profit an external world

The seeming impossibility of replying to Descartes' argument — and hence the

seen by the great German philosopher Kant as a "scandal to philosophy."

If you cannot rule out a

situation which would make P

false, you should not believe P.

Good Argument $\rightarrow$ Belief

If there is a valid argument for P and you should believe each of that argument's premises, you should believe P.

Let's now hold that up against the rule of belief which figured in our argument

for skepticism.

Good Argument $\rightarrow$ Belief

If there is a valid argument for P and you should believe each of that argument's premises, you should believe P.
