

More's proof can be laid out as follows:

1. Here is one hand.

2. Here is another hand.

C. There are two hands. $(1,2)$

He presents his proof of an external world in the following passage:

“I can now give a large number of different proofs, each of which is a perfectly rigorous proof; and at many other times I have been in a position to give many others. I can prove now, for instance, that two human hands exist.

How? By holding up my two hands and saying, as I make a certain gesture with the right hand, “Here is one hand,” and adding, as I make a certain gesture with the left, “and here is another.” And if,

by doing this, I have proved the existence of external things, you will all see that I can also do it now in numbers of other ways; there is no need to multiply examples.”

MOORE'S PROOF

He presents his proof of an external world in the following passage:

1. Here is one hand.

2. Here is another hand.

C. There are two hands. (1,2)

following passage:

He presents his proof of an external world in the

perfectly rigorous; and at many

different profits, each of which is a
