

Earthy = Marsy

Earthy = Venusy

But, for reasons we have already discussed — namely, the fact that identity is transitive — these three claims do not sit well together. So it appears that the psychological theory implies a contradiction.

Marsy $\neq$ Venusy

Basically the same point could be made about the version of the story on which, after the transmission to Mars, the individual who steps into the teletransporter on Earth steps back out. To tell that version of the story, we'd just need to introduce two names — Earthy-1 and Earthy-2 — for the individual on earth pre-teletransportation, and the individual who exists after the teletransportation.

It is easy enough to turn this into an argument against the psychological theory of survival.

1. If the psychological theory of survival is true, then Earthy = Marsy.
 2. If the psychological theory of survival is true, then Earthy = Venusy.
 3. If the psychological theory of survival is true, then Marsy = Venusy. (1,2)
 4. Marsy $\neq$ Venusy.
-

C. The psychological theory of survival is false.
(3,4)

These cases look bad for the psychological theory of survival. One might think that they provide a reason to favor a materialist view. What would a materialist say about teletransportation?

THE TELETRANSPORTATION ARGUMENT

This kind of example is called a case of **fission**, because (on the psychological view of survival) it looks like a case in which one person becomes two people.

At a first glance, this looks problematic only for the psychological view of survival.
But, as it turns out, cases of fission can be used to make trouble for other theories
of survival as well.

Let's return to a case we discussed earlier: the example of the Brain Transplant.

“Suppose first that I am one of a pair of identical twins, and that both my body and my twin’s brain have been fatally injured. Because of advances in neuro-surgery, it is not inevitable that these injuries will cause us both to die. We have between us one healthy brain and one healthy body. Surgeons can put these together.

If all of my brain continues both to exist and to be the brain of one living person, who is psychologically continuous with me, I continue to exist. This is true whatever happens to the rest of my body. ...”

As Parfit points out, we can also imagine a case in which only one hemisphere of
your brain survives.

“It is in fact true that one hemisphere is enough. There are many people who have survived, when a stroke or injury puts out of action one of their hemispheres. With his remaining hemisphere, such a person may need to re-learn certain things, such as adult speech, or how to control both hands. But this is possible. ... [So] I would survive if my brain was successfully transplanted into my twin's body. And I could survive with only half my brain, the other half having been destroyed. Given these two facts, it seems clear that I would survive if half my brain was successfully transplanted into my twin's body, and the other half was destroyed.”

Let's call this the case of **Hemisphere Transplant**. It seems, for reasons Parfit gives, that if you could survive Brain Transplant, you could also survive Hemisphere Transplant.

But if you are on board with this, that leads to a case about which it is really hard to know what we should say.

"My Division. My body is fatally injured, as are the brains of my two brothers. My brain is divided, and each half is successfully transplanted into the body of one of my brothers. Each of the resulting people believes that he is me, seems to remember living my life, has my character, and is in every other way psychologically continuous with me. And he has a body that is very like mine."

Let's call the resulting people *Lefty* and *Righty*. Then we seem to have four options.

It is hard to see how the first two could be true, since nothing seems to favor one over the other.

So it looks like the last option must be true: you do not survive.

But the third can not be true, since Lefty $\neq$ Righty.

Here's the puzzle: in both Hemisphere Transplant and My Survival, one of your hemispheres is successfully transplanted into a body which goes on living. Given that, how could you survive in one case but not the other?

You survive
as Lefty.

You survive
as Righty.

You survive as
Lefty and Righty.

You do not
survive.

transitive — these three claims do not sit well together. So it appears that the

psychological theory implies a contradiction.

But, for reasons we have already discussed — namely, the fact that identity is

twonames → Earthy-1 and Earthy-2 → forth individual on earth pre-

Earthstep back out. To tell that version of the story, we'd just need to introduce

teletransportation, and the individual who exists after the teletransportation.

Basically the same point could be made about the version of the story on which,

It is asy enough to turn this into an argument against the psychological theory of

Survival.

1. If the psychological theory of survival is true, then Earthy = Marsy.
 2. If the psychological theory of survival is true, then Earthy = Venusy.
 3. If the psychological theory of survival is true, then Marsy = Venusy. (1,2)
 4. Marsy $\neq$ Venusy.
-

C. The psychological theory of survival is false.
(3,4)

These ask bad for the psychological theory of survival. One might think that

about teletransportation?

they provide as on the far material view. What would a materialist say

THE TELETRANSPORTATION ARGUMENT

This kind of example is called a case of **fission**, because (on the psychological view

of survival) it looks like a case in which one person becomes two people.

At first glance, this looks problematic only for the psychological view of survival.

But, it turns out, cases of fission can be used to make trouble for theories

of survival as well.

“Suppose first that I am one of a pair of identical twins, and that both my body and my twin’s brain have been fatally injured. Because of advances in neuro-surgery, it is not inevitable that these injuries will cause us both to die. We have between us one healthy brain and one healthy body. Surgeons can put these together.

If all of my brain continues both to exist and to be the brain of one living person, who is psychologically continuous with me, I continue to exist. This is true whatever happens to the rest of my body. ...”

As Parfit points out, we can also imagine a case in which only one hemisphere of

your brain survives.

“It is in fact true that one hemisphere is enough. There are many people who have survived, when a stroke or injury puts out of action one of their hemispheres. With his remaining hemisphere, such a person may need to re-learn certain things, such as adult speech, or how to control both hands. But this is possible. ... [So] I would survive if my brain was successfully transplanted into my twin's body. And I could survive with only half my brain, the other half having been destroyed. Given these two facts, it seems clear that I would survive if half my brain was successfully transplanted into my twin's body, and the other half was destroyed.”

Let's call this the case of Hemisphere Transplant. It seems, for a Parfit

gives, that if you could survive Brain Transplant, you could also survive Hemispher

Transplant.

But if you are on board with this, that leads to a case about which it is really hard

to know what we should say.

"My Division. My body is fatally injured, as are the brains of my two brothers. My brain is divided, and each half is successfully transplanted into the body of one of my brothers. Each of the resulting people believes that he is me, seems to remember living my life, has my character, and is in every other way psychologically continuous with me. And he has a body that is very like mine."

options.

Let's call the resulting plot Lefty and Righty. Then we see to have four

over the other.

It is hard to see how the first two could be true, since nothing seems to favor one

(1) You survive as Lefty.

(3) You survive as both Lefty and Righty.

(4) You do not survive.

(2) You survive as Righty.

It is hard to see how (1) or (2) could be true, since nothing seems to favor one

So it looks like (4) must be true: you do not survive.

But (3) cannot be true, since $\text{Lefty} \neq \text{Righty}$.

hemisphere is successfully transplanted into already which is living. Given
