

Earthy = Marsy

Earthy = Venusy

But, for reasons we have already discussed — namely, the fact that identity is transitive — these three claims do not sit well together. So it appears that the psychological theory implies a contradiction.

Marsy $\neq$ Venusy

Basically the same point could be made about the version of the story on which, after the transmission to Mars, the individual who steps into the teletransporter on Earth steps back out. To tell that version of the story, we'd just need to introduce two names — Earthy-1 and Earthy-2 — for the individual on earth pre-teletransportation, and the individual who exists after the teletransportation.

It is easy enough to turn this into an argument against the psychological theory of survival.

1. If the psychological theory of survival is true, then Earthy = Marsy.
 2. If the psychological theory of survival is true, then Earthy = Venusy.
 3. If the psychological theory of survival is true, then Marsy = Venusy. (1,2)
 4. Marsy $\neq$ Venusy.
-

C. The psychological theory of survival is false.
(3,4)

These cases look bad for the psychological theory of survival. One might think that they provide a reason to favor a materialist view. What would a materialist say about teletransportation?

THE TELETRANSPORTATION ARGUMENT

This kind of example is called a case of **fission**, because (on the psychological view of survival) it looks like a case in which one person becomes two people.

At a first glance, this looks problematic only for the psychological view of survival.
But, as it turns out, cases of fission can be used to make trouble for other theories
of survival as well.

Split brain cases are puzzling no matter what your answer to the survival question is.

Our second puzzle targets more directly certain answers to the survival question.

Let's return to a case we discussed earlier: Derek Parfit's example of the Brain Transplant.

transitive — these three claims do not sit well together. So it appears that the
