

We'll shortly consider some ways of responding to Edwards' argument. But first let's think about how Edwards' argument might be related to an argument for fatalism.

There are truths  
about our future  
actions.

In the past, God  
had  
foreknowledge of  
our future  
actions.

We started off with two arguments for the reality of fate.

We have no  
choice about the  
past.

Let's turn to our last line of response to the two arguments. This is to deny the assumption, common to both arguments, that we have no choice about the past.

The denial of this assumption is often associated with William of Ockham, an English philosopher and theologian who was born about 15 years after Aquinas' death, in 1288. (He's the one that "Ockham's razor" is named after.)

To see why this might not be ridiculous, consider the overlooked philosophical problem of the incompatibility of free will and roommate true belief.

It seems that sometimes, your roommate can have true beliefs about what you will do; for example, the following might be true:

At 10 am today, your roommate  
believed that you would eat a salad  
for lunch.

Now imagine that at noon you are in the dining hall, about to grab a salad, when you are suddenly overcome with an unlikely desire for a fish sandwich. Do you have a choice about whether you will choose the salad or the fish sandwich? It seems that you do. **But then it also seems that you have a choice about whether your roommate's belief, at 10 am, was true.** After all, if you had chosen the fish sandwich, your roommate's belief that you would eat a salad would have been false.

If this story makes sense, it follows that you do sometimes have a choice about past events: you had a choice about whether, in the past, a certain belief about your future actions was true.

Of course, this does not mean that you have a choice about **every** past fact. For example, you don't now have a choice about whether it rained yesterday. But consider the sorts of "past facts" at play in the Fatalist Argument.

They are facts like this:

In 2000 BC it was true that on  
6/1/2030 you will get married.

This is a fact about the past; but it is also partly about the future. It is perhaps not so hard to believe that you will have a choice in 2030 about whether in 2000 BC this was a fact.

So perhaps Ockham's strategy of saying that we have a choice about some past facts helps with the Fatalist Argument. Does it help with the Foreknowledge Argument?

The kind of past facts at play in that argument are facts like  
this one:

In 2000 BC God knew that on  
6/1/2030 you will get married.

Let's return to the example about you having a choice about whether your roommate's belief was true.

In that case, you had the power to make your roommate's  
belief true, or make the belief false.

Will you, by analogy, have the power to make God's belief  
about your future actions false?
