

It is easy to construct intuitively powerful arguments in favor of consequentialism. Here is one:

Calling this an argument is a bit of a stretch -- the first premise is pretty close to the conclusion. But still: isn't the first premise plausible?

1. If one has the choice to bring about a worse outcome or a better outcome, one should never choose to bring about the worse outcome.
2. One should always choose to bring about the best outcome. (1)

-----  
C. Consequentialism is true. (2)

The very simple argument for consequentialism

## Consequentialism

An action is right if, of all available options, it would lead to the best outcome, and wrong otherwise.
