

Let's suppose for now that consequentialism is true. This raises two questions. The

first is: what makes one outcome, or state of affairs, better than another?

To answer this question is to give **a theory of value**: a theory about what makes one state of the world better, or worse than, another.

Let us say that a **good** is something that makes a state of affairs better, and a **bad** is something that makes a state of affairs worse.

# Consequentialism

An action is right if, of all available options, it would lead to the best outcome, and wrong otherwise.

Let's suppose for now that consequentialism is true. This raises two questions. The

first is: what makes one outcome, or state of affairs, better than another?

first is: what makes one outcome, first of affairs, better than another?

Let's suppose for now that consequentialism is true. This raises two questions. The

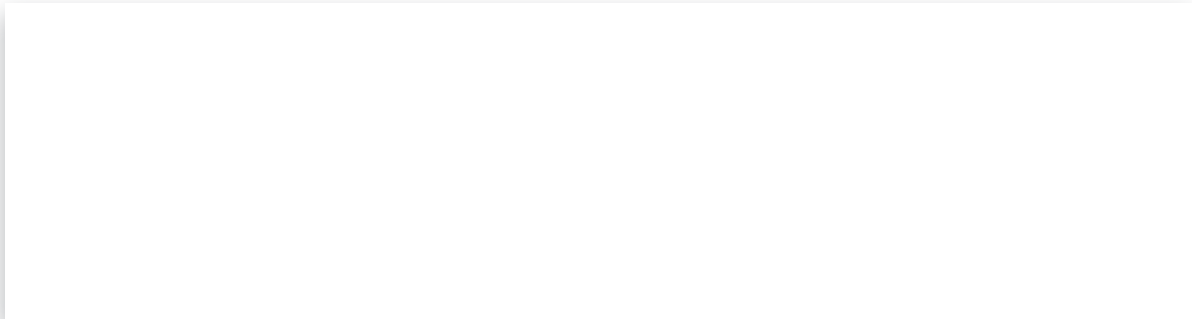

state of the world better, or worse than, another.

To answer this question is to give a theory of value: a theory about what makes one

Let us say that a **good** is something that makes a state of affairs better, and a **bad** is

something that makes a state of affairs worse.
