

Today we turn to our third big question. This question can be introduced by an example.

Suppose that in the year 2069 the surviving members of this Introduction to Philosophy class decided to have an Intro to Philosophy reunion, and all gathered in this room. Suppose that they decided to get a group picture taken.

Now imagine that, via some sort of time travel device, I now have that photo, and show it to you. You might ask: Am I one of those people? Which one am I?

It is very natural to assume that these questions must have determinate answers. There must be some fact of the matter about whether one of the people in the photo is you. And, if one is you, there must be some fact of the matter about which one is you.

Let's suppose that this is true: there must be a fact about whether you survive to be
in this picture, and must be a fact about which of the survivors you are.

Then we can ask a question about these facts:

**The survival
question:** What does it
take for for some
person at some other
time to be you?

A different question concerns the past.

At some time roughly 20 years ago, there was an embryo in some woman's uterus from which you grew. Was that embryo you?

Again, the easy answers are no help. But the question seems to matter; lots of people think that it is relevant to the question of whether, and when, abortion is morally permissible.

Today we turn to our third big question. This question can be introduced by an

example.

Suppose that in the year 2069 the surviving members of this Introduction to

this room. Suppose that they decided to get a group picture taken.

Philosophy class decided to have an Intro to Philosophy reunion, and all gathered in

Now imagine that, via some sort of time travel device, I have that photo, and

show it to you. You might ask: Am I one of those people? Which one am I?

But is every natural assumption that these questions must have determined answers?

is you. And, if one is you, there must be some fact about which one is

There must be some fact of the matter about whether or not the people in the photo

you.

in this picture, and must be a fact about which the survivors agree.

Let's suppose that this is true: there must be a fact about whether you survive to be

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1999 (Department of Health 2000). The number of people employed in the health sector has increased by 1.2 million, from 2.2 million in 1980 to 3.4 million in 1999.

There is a growing emphasis on the need to improve the quality of care and services provided by the public sector. This has led to a number of initiatives, including the introduction of the Health Service Act 1999, the establishment of the National Patient Safety Agency (NPSA) and the introduction of the Health Service Complaints Act 1999.

The Health Service Act 1999 introduced a number of changes to the way in which the public sector is run. These changes include the introduction of a new governance structure, the establishment of a new regulatory body and the introduction of a new system of funding.

The National Patient Safety Agency (NPSA) was established in 2001 to monitor and improve the safety of patients in the public sector. The NPSA is responsible for investigating and reporting on patient safety incidents, and for developing and implementing measures to prevent such incidents from occurring again.

The Health Service Complaints Act 1999 introduced a new system of funding for the public sector. This system is based on the principle of 'pay for performance', whereby the public sector is paid for the quality of the care and services it provides.

The introduction of these initiatives has led to a number of improvements in the quality of care and services provided by the public sector. However, there is still a need to continue to improve the quality of care and services provided by the public sector.

One of the ways in which the quality of care and services provided by the public sector can be improved is by increasing the number of people employed in the public sector. This can be done by recruiting more people to the public sector, and by providing training and development opportunities for existing staff.

Another way in which the quality of care and services provided by the public sector can be improved is by increasing the number of people employed in the health sector. This can be done by recruiting more people to the health sector, and by providing training and development opportunities for existing staff.

There is a need to continue to improve the quality of care and services provided by the public sector. This can be done by increasing the number of people employed in the public sector, and by providing training and development opportunities for existing staff.

**The survival
question:** What does it
take for for some
person at some other
time to be you?
