

Today we turn to our third big question. This question can be introduced by an example.

Suppose that in the year 2069 the surviving members of this Introduction to Philosophy class decided to have an Intro to Philosophy reunion, and all gathered in this room. Suppose that they decided to get a group picture taken.

Now imagine that, via some sort of time travel device, I now have that photo, and show it to you. You might ask: Am I one of those people? Which one am I?

It is very natural to assume that these questions must have determinate answers. There must be some fact of the matter about whether one of the people in the photo is you. And, if one is you, there must be some fact of the matter about which one is you.

Let's suppose that this is true: there must be a fact about whether you survive to be
in this picture, and must be a fact about which of the survivors you are.

Then we can ask a question about these facts:

**The survival
question:** What does it
take for for some
person at some other
time to be you?

This might seem like kind of a weird question. It also might seem to be a really easy question; you might think that it would just be the person who looks like you, or who has a driver's license with your name on it.

It turns out that this is not such an easy question. One way to see this is by thinking about some harder cases where this question arises.

Now imagine that, via some sort of time travel device, I now have that photo, and show it to you. You might ask: Am I one of those people? Which one am I?

example.

you.

in this picture, and must be a fact about which of the survivors you are.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1999. The public sector has grown from 10% of the economy to 15% of the economy.

There is a growing emphasis on the need to improve the efficiency of the public sector. This has led to a number of initiatives, including the introduction of competition, the restructuring of public services, and the introduction of performance targets. These initiatives have led to a number of changes in the way that public services are delivered, and have led to a number of improvements in the efficiency of the public sector.

One of the main reasons for the growth of the public sector is the increasing demand for public services. This is due to a number of factors, including the ageing population, the increasing demand for health care, and the increasing demand for social services. The public sector has been able to meet this demand by increasing its resources and by improving its efficiency.

Another reason for the growth of the public sector is the increasing demand for public services. This is due to a number of factors, including the ageing population, the increasing demand for health care, and the increasing demand for social services. The public sector has been able to meet this demand by increasing its resources and by improving its efficiency.

The public sector has also been able to improve its efficiency by introducing competition. This has led to a number of improvements in the way that public services are delivered, and has led to a number of improvements in the efficiency of the public sector. The public sector has also been able to improve its efficiency by restructuring public services.

Finally, the public sector has been able to improve its efficiency by introducing performance targets. This has led to a number of improvements in the way that public services are delivered, and has led to a number of improvements in the efficiency of the public sector. The public sector has also been able to improve its efficiency by restructuring public services.
