

Today we turn to our third big question. This question can be introduced by an example.

Suppose that in the year 2069 the surviving members of this Introduction to Philosophy class decided to have an Intro to Philosophy reunion, and all gathered in this room. Suppose that they decided to get a group picture taken.

Now imagine that, via some sort of time travel device, I now have that photo, and show it to you. You might ask: Am I one of those people? Which one am I?

It is very natural to assume that these questions must have determinate answers. There must be some fact of the matter about whether one of the people in the photo is you. And, if one is you, there must be some fact of the matter about which one is you.

Let's suppose that this is true: there must be a fact about whether you survive to be
in this picture, and must be a fact about which of the survivors you are.

Then we can ask a question about these facts:

**The survival
question:** What does it
take for for some
person at some other
time to be you?

To introduce our main answers to the survival question, it will be useful to think about a simple, uncontroversial example of survival.

All of you believe that you will wake up tomorrow in your bed. To put the same point another way, all of you believe that the person now sitting in your seat is the same person as — identical to — the person who will wake up in your bed tomorrow morning.

What do we mean when we say that you are identical to that person?

Here it is important to get clear at the outset on one distinction which, if not attended to, can make these questions more confusing than they have to be.

This is the distinction between **numerical** and **qualitative** identity.

To say that x and y are numerically identical is to say that they are literally the same thing — they are one, not two.

To say that x and y things are qualitatively identical is to say that they are exactly resembling — they have just the same properties.

When we say that you are identical to the person who will get out of your bed tomorrow morning, we are not of course saying that you are qualitatively identical to that person. Their hair will be messed up, and they will be wearing different clothes.

Rather, we mean that you are numerically identical to that person: there is just

one person who is today in this class, and is tomorrow morning in that bed.

Our first answer is also the simplest one. This says that you are the same person as the person who will wake up in that bed tomorrow because you are the same material thing as that person.

**materialist
survival**

But this is not the only answer to our question. It is a widely held view that we are not simply material beings, but also have immaterial souls.

If one believes in immaterial souls, then it is natural to think
that one's survival is closely linked to the continued
existence of one's immaterial soul.

This suggests an alternative theory of survival. On this view,
the person who wakes up in that bed tomorrow is you
because they are, or have, the same immaterial soul.

A solid red circle with a subtle drop shadow, centered on a white background. Inside the circle, the words "soul" and "survival" are written in a white, lowercase, sans-serif font, stacked vertically.

soul
survival

But these are not the only possible views here. One might also hold that you are that person not because of any physical connections, and not because of anything involving immaterial souls, but rather because of **psychological connections** between you and that person.

in this picture, and must be a fact about which the survivors are

Let's suppose that this is true: there must be a fact about whether you survive to be

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1995, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1995, 88% of the public sector workforce were women, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are part-time or flexible. In 1995, 22% of the public sector workforce were employed on part-time or flexible contracts, compared with 12% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well paid. In 1995, the average salary of a public sector employee was £18,000, compared with £15,000 in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

There are a number of other reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of jobs that are secure. In 1995, 88% of the public sector workforce were employed on permanent contracts, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well located. In 1995, 22% of the public sector workforce were employed in London, compared with 12% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well matched to the skills of women. In 1995, 88% of the public sector workforce were employed in jobs that required a degree or higher qualification, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.
