

Today we turn to our third big question. This question can be introduced by an example.

Suppose that in the year 2069 the surviving members of this Introduction to Philosophy class decided to have an Intro to Philosophy reunion, and all gathered in this room. Suppose that they decided to get a group picture taken.

Now imagine that, via some sort of time travel device, I now have that photo, and show it to you. You might ask: Am I one of those people? Which one am I?

It is very natural to assume that these questions must have determinate answers. There must be some fact of the matter about whether one of the people in the photo is you. And, if one is you, there must be some fact of the matter about which one is you.

Let's suppose that this is true: there must be a fact about whether you survive to be
in this picture, and must be a fact about which of the survivors you are.

Then we can ask a question about these facts:

**The survival
question:** What does it
take for for some
person at some other
time to be you?

Here is another question about the future.

Given advances in computing, it may well be possible in your life time for you to enhance your cognitive powers by replacing parts of your brain with computing devices. It may even be possible for your cognitive apparatus to be, in some sense, uploaded to a computer.

The resulting thing would be, wholly or in part, a synthetic device. Would that thing
still be you?

Again, the easy answers don't help. It looks like we need an answer to the survival question.

example.

is you. And, if one is you, there must be some fact about which one is

you.

in this picture, and must be a fact about which the survivors agree.

Let's suppose that this is true: there must be a fact about whether you survive to be

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1995, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1995, 88% of the public sector workforce were women, compared with 78% in 1980.

Another reason is that the public sector has a high proportion of women in its senior management. In 1995, 33% of the public sector senior management were women, compared with 23% in 1980. This is a significant increase, and it suggests that the public sector is becoming more gender equal in its senior management.

There are a number of reasons why the public sector has a high proportion of women in its senior management. One reason is that the public sector has a high proportion of women in its senior management. In 1995, 33% of the public sector senior management were women, compared with 23% in 1980.
