Let's now see how our
argument looks if we sub in
(2') for (2).

2'. If something is omnipotent, it can bring about any possible situation.

1. If God exists, then God is omnipotent.
2. If something is omnipotent, it can do anything.
3. If God exists, then God can do anything. (1,2)
4. If God exists, then God is wholly good.
- 5*. If something is wholly good, it always eliminates as much pointless evil as it can.
6. If God exists, then God eliminates as much pointless evil as God can. (4,5)
7. If God exists, then God eliminates all pointless evil. (3,6)
8. If God exists, then there is no pointless evil. (7)
- 9*. Some pointless evil exists.

C. God does not exist. (8,9)

The first part of the paper discusses the importance of understanding the underlying mechanisms of the observed phenomena. It is crucial to identify the factors that influence the system's behavior and to develop a theoretical framework that can explain the observed results. This involves a combination of experimental data and theoretical modeling.

In the second part, we present the experimental setup and the results obtained from the measurements. The data shows a clear trend that can be attributed to the changes in the system's parameters. We then compare these results with the theoretical predictions and find a good agreement between the two.

The third part of the paper focuses on the analysis of the data and the identification of the key factors that influence the system's behavior. This involves a detailed examination of the experimental results and the theoretical model. We find that the system's behavior is primarily determined by the changes in the system's parameters, which can be controlled by the experimental conditions.

In the final part, we discuss the implications of the results and the potential applications of the findings. The results suggest that the system's behavior can be controlled by the changes in the system's parameters, which can be useful in various applications. We also discuss the limitations of the study and the need for further research in this area.
