

the basic
argument

**allowable
evils**

A large orange circle with a slight drop shadow, containing the text "what is omnipotence?".

what is
omnipotence?

the
argument
reformulated

This argument simply replaces (5) with (5^*) . But this argument is invalid. To fix it, we need to make some changes to the premises which are supposed to follow from (5^*) .

1. If God exists, then God is omnipotent.
2. If something is omnipotent, it can do anything.
3. If God exists, then God can do anything. (1,2)
4. If God exists, then God is wholly good.
- 5*. If something is wholly good, it always eliminates as much pointless evil as it can.
6. If God exists, then God eliminates as much pointless evil as God can. (4,5)
7. If God exists, then God eliminates all pointless evil. (3,6)
8. If God exists, then there is no pointless evil. (7)
9. Some evil exists.

C. God does not exist. (8,9)

But this is not quite enough; the argument is still invalid, since the conclusion does not follow from (8) and (9).

the 1990s, the number of people with a mental health problem has increased by 50% (Mental Health Foundation 2000).

There is a growing awareness of the need to address the needs of people with mental health problems, and the importance of providing them with appropriate services. However, there is a significant gap between the current needs of people with mental health problems and the services that are available to them. This gap is due to a number of factors, including a lack of resources, a lack of training for health professionals, and a lack of awareness of the needs of people with mental health problems.

One of the main reasons for the gap between need and service is a lack of resources. There are not enough mental health professionals to meet the demand for services, and there are not enough resources to provide the services that are needed. This is particularly true in the area of community mental health services, which are essential for the prevention and early intervention of mental health problems.

Another reason for the gap is a lack of training for health professionals. Many health professionals do not have the necessary training to deal with people with mental health problems, and this can lead to a lack of confidence and a reluctance to provide services. This is particularly true for general practitioners, who are often the first point of contact for people with mental health problems.

A third reason for the gap is a lack of awareness of the needs of people with mental health problems. Many people do not understand what it is like to have a mental health problem, and this can lead to a lack of empathy and a failure to provide the services that are needed. This is particularly true for the general public, who often have a negative view of people with mental health problems.

There are a number of ways in which the gap between need and service can be closed. One way is to increase the number of mental health professionals and the resources available to them. Another way is to provide training for health professionals, so that they are better equipped to deal with people with mental health problems. A third way is to increase awareness of the needs of people with mental health problems, so that they are better understood and better served.

It is important to address the gap between need and service, as it is essential for the prevention and early intervention of mental health problems. This is particularly true in the area of community mental health services, which are essential for the prevention and early intervention of mental health problems. By addressing the gap, we can ensure that people with mental health problems receive the services that they need, and that they are able to live full and productive lives.
