

the basic
argument

**allowable
evils**

A large orange circle with a slight drop shadow, containing the text "what is omnipotence?".

what is
omnipotence?

the
argument
reformulated

1. If God exists, then God is omnipotent.
- 2'. If something is omnipotent, it can bring about any possible situation.
3. If God exists, then God can bring about any possible situation. (1,2)
4. If God exists, then God is wholly good.
- 5*. If something is wholly good, it always eliminates as much pointless evil as it can.
6. If God exists, then God eliminates as much pointless evil as God can. (4,5)
7. If God exists, then God eliminates all pointless evil that it is possible to eliminate. (3,6)
8. If God exists, then there is no pointless evil that it is possible to eliminate. (7)
- 9*. Some pointless evil that it is possible to eliminate exists.

C. God does not exist. (8,9)

We now need to make a few adjustments to the rest of the argument.

Let's call this the 'argument
from pointless evil 2.0'

THE ARGUMENT FROM POINTLESS EVIL 2.0

This argument is complex,
but powerful.

We saw that the theist
could reject premise (5) of
Mackie's original argument;
but (5*) is considerably
harder to reject.

We saw that the theist could reject premise (2) of our first version of the argument from pointless evil; but (2') is considerably harder to reject.

What's the best move for
the theist in responding to
the argument from pointless
evil 2.0?

Q

2

11

The first part of the paper discusses the importance of understanding the underlying mechanisms of the observed phenomena. This is followed by a detailed analysis of the data, which reveals several key findings. The results indicate that the proposed model is highly effective in capturing the essential features of the system under study. Furthermore, the analysis shows that the system exhibits a high degree of robustness and adaptability, which are crucial for its successful application in real-world scenarios. The paper concludes by highlighting the potential of the proposed approach and suggesting directions for future research.

In the second part of the paper, we explore the implications of these findings for the broader field of research. We argue that the insights gained from this study can be applied to a wide range of related problems, thereby contributing to the advancement of the field. Additionally, we discuss the challenges associated with the implementation of the proposed model and provide recommendations for addressing these challenges. Finally, we summarize the main contributions of the paper and express our appreciation to the reviewers for their valuable comments.

The paper is organized as follows. Section 1 introduces the research problem and the objectives of the study. Section 2 presents the theoretical background and the proposed model. Section 3 describes the experimental setup and the data used for the analysis. Section 4 presents the results of the analysis and discusses their implications. Section 5 concludes the paper and suggests directions for future research.
