Why does the difference between (2) and (2') matter? Remember that we imagined the proponent of Mackie's argument wanting to reject (9*).

Mackie's objection to that move was to say that, since God can do anything, any evil is a pointless evil — since God could always bring about the outweighing good without that evil.

But now we are saying that God can bring about anything possible. And maybe some goods are such that it is impossible for them to exist without the corresponding evil. And, if that is the case, that evil might not be pointless. If every evil is like this, then

(9*) is false.

2'. If something is omnipotent, it can bring about any possible situation.

The first part of the paper discusses the importance of understanding the underlying mechanisms of the observed phenomena. It is crucial to identify the factors that influence the system's behavior and to develop a theoretical framework that can explain the observed patterns. This involves a combination of experimental data and theoretical modeling.

The second part of the paper focuses on the development of a robust statistical model that can accurately predict the system's behavior. This model is based on the principles of Bayesian inference, which allows for the incorporation of prior knowledge and the updating of beliefs as new data is observed. The model is validated using a large dataset of experimental results, demonstrating its ability to generalize to new, unseen data.

The third part of the paper presents the results of the model's application to a specific problem. The model is used to predict the system's behavior under various conditions, and the results are compared with experimental data. The model's predictions are shown to be in excellent agreement with the experimental results, indicating its high predictive power.

The final part of the paper discusses the implications of the findings and suggests directions for future research. It is concluded that the developed model provides a valuable tool for understanding and predicting the system's behavior, and that further research is needed to explore the model's potential applications in other contexts.
