

I want to discuss two ways of challenging Libet's conclusion.

In his experiments, Libet took the EEG readings at RP-onset time to indicate an unconscious decision to act. This leads to two questions.

Is RP-onset an
unconscious
decision?

If RP-onset is an
unconscious
decision, does
that limit our
free will?

replies to
Libet

A large, solid red circle is centered on a white background. Inside the circle, the text "the Libet experiments" is written in a white, sans-serif font, centered both horizontally and vertically.
