

Libet's experiments are fascinating. But one can challenge both his views about when unconscious decisions occur, and his views about the significance of the timing of unconscious decisions.

There is much ongoing work in neuroscience and social science about the will and freedom of the will. If you'd like to know more, a good overview is the philosopher Alfred Mele's book *Free*. Many of the critical points made above are due to his work.

Is RP-onset an
unconscious
decision?

If RP-onset is an
unconscious
decision, does
that limit our
free will?

replies to
Libet

In ancient times, philosophers worried about the challenge to free will from fate. After

the birth of modern physics, many worried about the challenges it would bring from

determinism. Our topic today is much more recent challenge to free

will prosper by contemporary neuroscience.
