

There is wide experimental confirmation of the fact that the sort of increased brain activity which occurs at RP-onset is correlated with actions. But that does not mean that it is an unconscious decision. Perhaps, for instance, RP-onset is a process which sometimes leads to a decision, rather than the decision itself. Maybe it just shows that the action is being considered, or imagined.

Some aspects of Libet's experiments, in fact, suggest that

RP-onset is not a decision.

Is RP-onset an
unconscious
decision?

If RP-onset is an
unconscious
decision, does
that limit our
free will?
