

Does this show that there is **no** space for conscious free will? Let's think about that.

Libet thought that, in the time between W time and the time of the action, the subject may be able to block the execution of the action which had already been decided on, unconsciously, by the brain.

And in fact Libet carried out further experiments which he took to show that this
is indeed possible.

replies to
Libet

A large, solid red circle is centered on a white background. Inside the circle, the text "the Libet experiments" is written in a white, sans-serif font, centered both horizontally and vertically.

is free will
an important
good?

“There could be a conscious ‘veto’ that aborts the performance even of the type of ‘spontaneous’ self-initiated act under study here. This remains possible because reportable conscious intention, even though it appeared distinctly later than onset of RP, did appear a substantial time (about 150 to 200 ms) before the beginning of the movement as signaled by the EMG.”
