

Let's turn to the last assumption that the free will defense requires: the assumption that free will is a great good.

Free will is a
great good.

Even God could not
have given us free
will while ensuring
that we never used
that free will to
bring about evil.

We have free
will.

Many people think that it is; many think that life would not be worth living, or at least would be considerably worse, if we did not have free will.

The question we are raising is related to a famous thought experiment from the philosopher Robert Nozick.

“Suppose there were an experience machine that would give you any experience you desired. Superduper neuropsychologists could stimulate your brain so that you would think and feel you were writing a great novel, or making a friend, or reading an interesting book. All the time you would be floating in a tank, with electrodes attached to your brain ... Would you plug in? What else can matter to us, than how our lives feel from the inside?

Presumably the experience machine would also give you the illusion of free will. You would have the feeling that you were making decisions, and accomplishing things on your own. (Of course, while you were in the experience machine you would not know that you were in the experience machine — that would ruin the illusion.)
