Rewarding
God exists

God does
not exist

IOS

$$\text{Pr.} = m$$

$$\text{Pr.} = 1 - m - n$$

Expected
utility

Objection 2: Pascal is assuming that, if God exists, there is a 100% chance that believers will get infinite reward.

$$\text{Pr.} = n$$

No reward
God exists

As this chart makes clear, adding this complication has **no effect** on the result. Pascal needn't assume that God will certainly reward all believers; he need only assume that there is a nonzero chance that God will reward all believers.

As this chart makes clear, adding this complication has

renvairdallibeliavers.

no effect on the result. Pascal didn't assume that

as sure that there is a nonzero chance that God will

God will certainly reward all believers; he need only
