

So far we have focused on objections which try to show that expected utility calculations do not deliver the result that it is rational to believe that God exists.

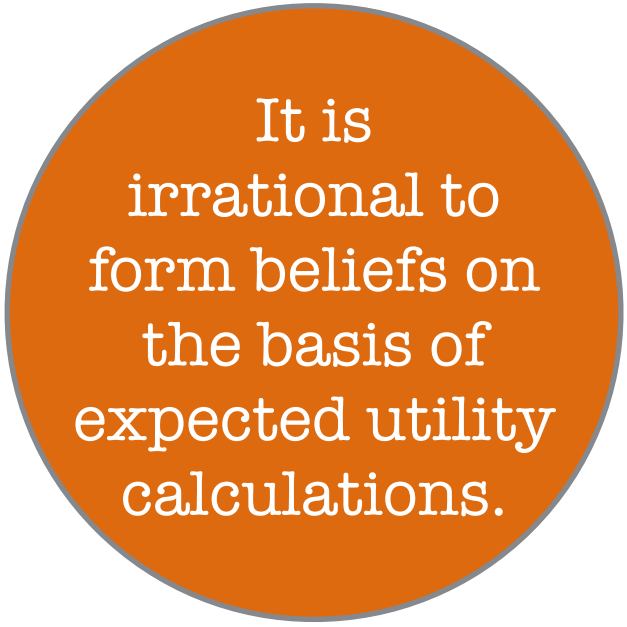

I want now to consider three quite different lines of reply to Pascal's argument, which do not involve trying to find a flaw in his calculations.

In cases with
infinite utility,
the rule of
expected utility
fails.

A large green circle with a thin grey border. Inside the circle, the text "It is impossible to form beliefs on the basis of expected utility calculations." is written in white, serif font, centered and arranged in six lines.

It is
impossible to
form beliefs on
the basis of
expected utility
calculations.

It is
irrational to
form beliefs on
the basis of
expected utility
calculations.

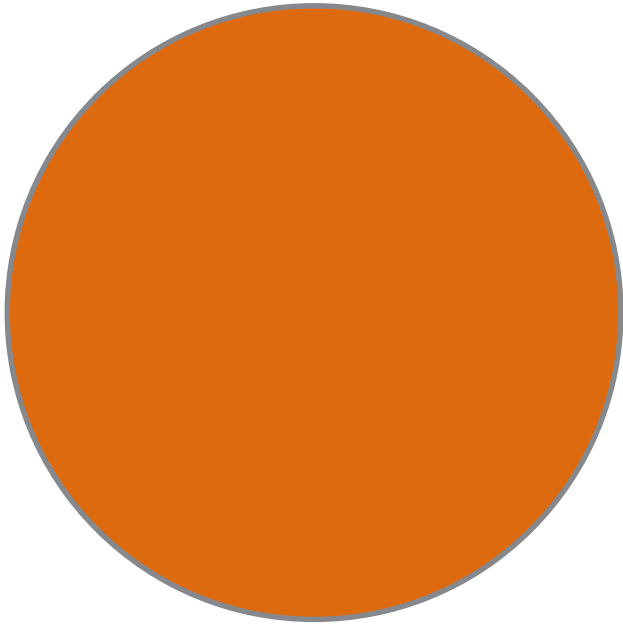

So far we have focused on objects which try to show that expected utility

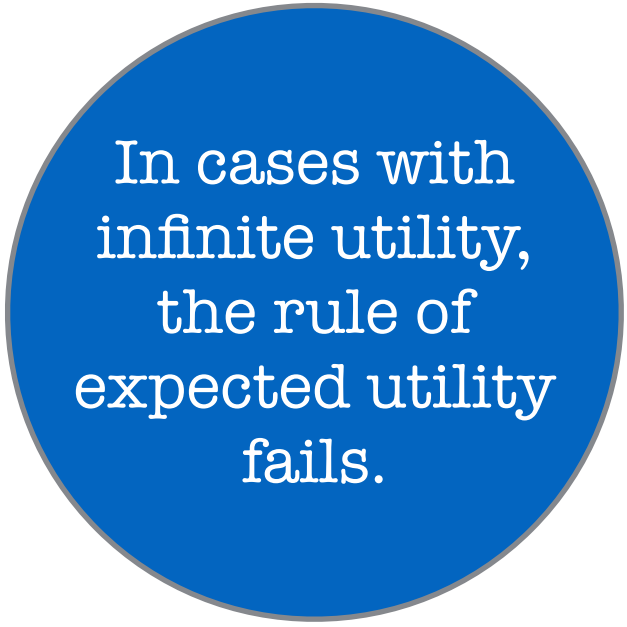

calculus does not deliver the result that it is rational to believe that God exists.

I want now to consider the quite different line of reply to Pascal's argument,

which do not involve trying to find a flaw in his calculation.
