Anti-
Wager God
exists

It is no longer obvious that belief has a higher chance of reward than nonbelief: we need an argument that Rewarding God is more likely to exist than Anti-Wager God. This shows that Pascal's argument can't be completely free of commitments to the probabilities of certain theological claims.

Objection 4: God might
give eternal reward to
just those who do not
believe.

Note also that this scenario is analogous to the hypothesis that God rewards only the adherents of certain specific religions, only one of which can be believed.
