

Last time we introduced the question of what we should believe. We began by considering this rule of belief:

No Proof $\rightarrow$ No Belief

If you can't give a good
argument for P, don't
believe P.

But we saw that this led to the result that you should not believe anything at all, which seems very implausible.

At the very least, it seems, we should believe things that we can be certain of:

1. Yesterday morning, the sun came up.

2. Two mornings ago, the sun came up.

3. Three mornings ago, the sun came up.

.....

N. N days ago, the sun came up.

N+1. If on every past morning the sun came up,
then tomorrow morning the sun will come up.

C. The sun will come up tomorrow. (1-N+1)

is this argument valid?

This looks like progress. If we should believe all of the premises of this argument, then it looks like we have an explanation of why we should believe the conclusion.

We already have an explanation of why we should believe premises 1-N.

What about premise $N+1$?

Do my senses tell me that it is true? Can I be certain that it is true?

Then it seems that, if Foundationalism is true, I must have a good argument for it.
