

Last time we introduced the question of what we should believe. We began by considering this rule of belief:

No Proof $\rightarrow$ No Belief

If you can't give a good
argument for P, don't
believe P.

But we saw that this led to the result that you should not believe anything at all, which seems very implausible.

At the very least, it seems, we should believe things that we can be certain of:

1. Yesterday morning, the sun came up.
 2. Two mornings ago, the sun came up.
 3. Three mornings ago, the sun came up.
 -
 - N. N days ago, the sun came up.
-
- C. The sun will come up tomorrow. (1-N)

Remember that a good argument is a valid argument whose premises you should believe. It is plausible that you should believe each of the premises of this argument. But is it valid?

Can you think of any premise which we can add to the argument
which would make the argument valid?

Here's a natural choice:

If on every past morning the sun
came up, then tomorrow morning
the sun will come up.
